Prompting equipment - autocues - teleprompters - teleprompting

Laptop Management Unit

The Portaprompt Laptop Management Unit has been designed to make using a laptop in the prompting environment easier whether on location or in a studio.

It contains

A Scan converter to convert PC. VGA picture signals to composite video either NTSC or PAL.

A four output Video Distribution Amplifier (VDA) with BNC outputs.

A 100-240v AC mains power supply that powers the laptop, the VDA, and Scan converter.

It also has an output to power Portaprompt's motorised conference pole hand control and either a 12v DC monitor or suitable 12v DC printers via an industry standard 4 pin XLR chassis socket.

All of the above can also be powered with a 12v DC battery via an industry standard 4 pin XLR trailing socket.

Key Benefits

- Reduces cabling, saving time.
- Powers a laptop, printer, motorised pole hand control and external monitor.
- 4 output video Distribution Amplifier
- VGA in and out.
- S video out.
- RGB out.
- World wide mains input.
- Takes in 12 DC and converts up to selectable laptop voltages.
