

PORTAPROMPT

MICROPROMPT E.N.G. RIGGING

Rigged directly on the camera in seconds, the MicroPrompt uses an LED backlit LCD display for both minimum size and weight. The result is a highly versatile miniature on-camera head-up display for hand-held, Steadicam shots, confined space locations and small studios. All type can be used with optional Wireless Link unit.

The MicroPrompt is available in two sizes 7" for ultra light weight applications and superb 9" for almost all other applications. We are using the 9" daily now in many normal studio shoots in our hire department.

The camera handle Rigging arm can be used to mount a display with or without a hood.

With no hood the rig is lighter, and there is no light lost to the camera or from the LCD display. This allows the use of LED chroma keying lighting lens rings. The presenter should not be too close to the camera otherwise the presenter eye line can be compromised. We have used this system to great effect in the UK on major TV broadcasts in our hire department.

The Matt Box Bars mounting option allows it to rig from the bar mount on the front of the camera. This gives a very rigid mount allowing the camera operator greater freedom of shots. The hood has to be used with this type of mount.

With the Hood the eye line is perfect.

Above is the new Universal MicroPrompt rigging fitted with and without the new dual purpose hood.

For the 9" without the hood the weight is 1.05 kg. With the hood it is 2.0 kg.

For the 7" without the hood the weight is 0.9 kg. With the hood it is 1.85 kg.

Comes complete with battery cables, power supply, video cables, and combined video power lead.

PORTAPROMPT

UNIVERSAL MINI CAMERA RIGGING

With the advent of the small HD cameras our mini camera rigging has opened up new users to being able to use prompting. It makes use of the MicroPrompt hood display and reflector.

So it is possible to re-use the hood display on either Mini cameras or larger on the shoulder E.N.G. cameras by just changing the rigging. This dual option is part number 300-011 for the 7" and 300-012 for the 9".

The result is a highly versatile miniature on-camera head-up display for confined space locations, small studios and training. All type can be used with optional Wireless Link and Stroller units.

The MicroPrompt is available in two sizes 7" for ultra light weight applications and superb 9" for almost all other applications. We are now using the 9" daily now in many normal studio shoots as well as on more portable jobs in our busy hire department.

The extremely low weight of these head-up units make them ideal in the portable environment and also for light weight pan and tilt robotic heads in smaller studios.

Above is the Universal MicroPrompt rigging fitted to a Sony Z1 and to the left a Panasonic AW E600.

For the 9" With the hood, glass and rigging it is 2.15 kg.

For the 7" With the hood, glass and rigging it is 2.0 kg.
